

ABSTRACT

A baby bottle holder for baby self-feeding comprises an adjustable hanging ~~means~~ mechanism; and, a bottle holding ~~means~~ mechanism, attached to the adjustable hanging ~~means~~ mechanism, such that when hung, a bottle inserted into the bottle holding ~~means~~ mechanism hangs at an appropriate angle for feeding a baby positioned under the baby bottle holder. This baby bottle holder is made of a flexible material, and adjusts easily to fit on a variety of car seat/carrier/stroller handles, or other support.
